Getting Started with Minecraft

Install Minecraft: Education Edition

Minecraft: Education Edition can be installed on Chromebook, iPad, Mac, and PC. To ensure your experience with Minecraft: Education Edition is top-notch, make sure your devices meet the minimum system requirements. To check if your device supports Minecraft: Education Edition, see [System Requirements](#).

If you have questions about setting up Minecraft: Education Edition, the following link will provide you with some [frequently asked questions and additional information](#) about set-up. On this page, you will find assistance for:

- Get Started
- Purchase Licenses
- Administration and License Management
- Installation
- Troubleshooting

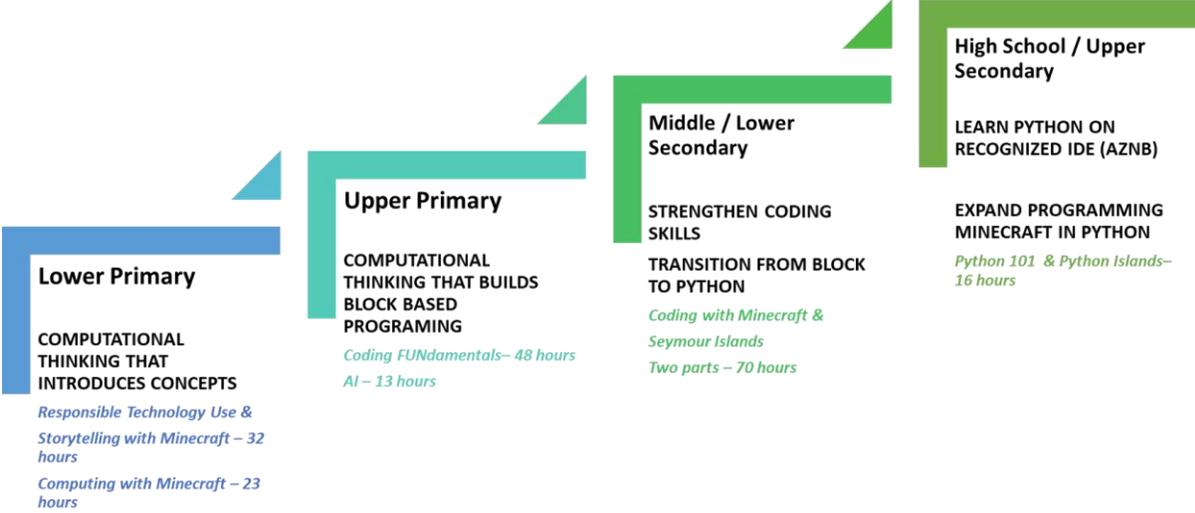

Preparing to Teach with Minecraft: Education Edition

Teachers do not need to have any prior computer science experience; however, they should familiarize themselves with a basic understanding of what is Minecraft: Education Edition. Support for building out teacher knowledge can be found here:

[Minecraft: Education Edition: Teacher Academy](#)

[Minecraft: Education Edition Webinar Series](#)

Computer Science Pathway Progression

Coding Fundamentals: Part 1 - Animal Research Center is a part of the Upper Primary (Grades 3-5 | Ages 8-11) computer science progression. In this part of the progression, students are focusing in developing and using coding concepts, such as loops, conditionals, and debugging, with consistency in with Minecraft: Education Edition. Students are also building out their digital fluency skills as they analyze the credibility of different sources when researching to find out more information about animals.

Students will have multiple opportunities to manipulate and build out their own programs within Code Builder to solve problems and accomplish tasks.

Students will also continue to have opportunities to collaborate during their multiplayer experiences and provide one another with feedback during program development.

Curriculum Summary

Coding Fundamentals: Part 1 – Animal Research Center is specially designed computer science content for students in Upper Primary/Grades 3-5/Ages 8-11. Students will learn, practice, and apply relevant computer science skills and concepts as well as literacy skills in both unplugged and digital experiences. The lessons are designed to provide students with an opportunity to build knowledge of the concept(s) in an unplugged version (i.e., demonstrate the concept on paper), practice the concept with the direct support of their teacher in the Minecraft world, and then finally by completing the task independently.

Lesson Design

Each EDU guide contains multiple activities that are intended to be taught over the specified amount of sessions (explained in the **Instructional Sequence** part of this document); however, you should use discretion and modify/adapt the lesson activities based on your students' needs and abilities. Within the lessons, the instructional sequence will contain three parts correlating with the gradual release model:

Direct Instruction—Teacher-Directed, “I Do”	In the first step, the teacher introduces and models the appropriate way of performing the skills included in the new concept being taught.
Guided Instruction—Teacher Modeling, “We Do”	After the teacher models the correct way to understand or perform the new concept being taught, teacher will guide the students as they work through some examples together.
Independent Practice—Teacher Support, “You Do”	This step is where students demonstrate their initial level of understanding of the new concept being taught through independent practice.

Instructional Materials

Curriculum Overview	That is this document you are reading now! This will provide you with insight about the curriculum and what is taught within the curriculum.
Educator’s Guides (EDU Guides)	An educator’s guide is provided for each of the lessons. The guide provides a high-level overview of the lesson, learning goals, standards addressed, required preparation for the activities, the lesson plans for the activities, and any additional materials needed.
Classroom Presentations	Each unit is supported by its own PowerPoint presentation to provide structure and guide the educator through the activities for the lesson.

Formative Assessments	After each lesson in the EDU guide, there is an opportunity to check for student understanding of the concept taught within the lesson. These formative assessments are typically comprised of 2-4 questions directly related to the learning that just took place.
Summative Assessment	At the end of the entire lesson sequence, students will be provided with a performance-based task to demonstrate their new knowledge and skills learned throughout the computer science unit, Coding Fundamentals Part 1: Animal Research Center. This performance-based task can be assessed using the provided rubric.
Minecraft World Files	The specific world files needed to experience the instructional activities have been linked directly within the Educator’s Guides.

Introduction

Level: Upper Primary | Grades 3-5 | Ages 8-11

Essential Question: How can computers help us model plausible solutions to identified problems?

Overview

Welcome to the Animal Research Center (ARC), a place where students can learn all about animals in different habitats (biomes) and the challenges they face. Before they can embark on their field missions, students will learn about the tools they have at their disposal. After they are fully prepared, students will complete their ARC assignments:

- Galapagos Islands: Sea Turtle Assistance
- Arctic: Polar Bear Rescue
- China: Panda’s Protected Habitat
- Pacific Northwest: Gray Wolves

After completing their field missions, the students will report back to Dr. Barwin and complete their final task on the biomes.

Pacing: 16 hours (could be more if tutorials and/or supplemental lessons are included)

Materials

Hardware	<ul style="list-style-type: none">• The teacher will need a laptop or tablet with a projector for the plugged-in coding lessons.• Internet access will be required for a portion of the lessons and activities.• Each student will need a device to complete the plugged-in coding activities.
Software	<ul style="list-style-type: none">• Minecraft: Education Edition needs to be deployed on the devices utilized within these lessons. Use this link to find information about Deploying Minecraft: Education Edition.• The teacher and students will need the relevant MCworld files downloaded for each lesson (or they can be accessed from the in-game library).
Other Materials	<ul style="list-style-type: none">• Grid Paper (for sketch plans)• Any additional handouts needed will be included within the individual EDU guides

Minecraft: Education Edition Teaching and Learning Framework

<p>GOAL: Provide students with the necessary skills to become creative coders and content creators</p>	
<p style="text-align: center;">Coding Mindset</p> <p>Although Minecraft: Education Edition provides rigorous and engaging academics, we also deliver a holistic education- providing instruction for the social, emotional, and physical needs for our students. We want to foster a distinctive set of attributes. These qualities prepare our students to make exceptional contributions both in school and outside of school.</p> <p style="text-align: center;"> CURIOUS COMMITTED COOPERATIVE CONSIDERATE CONFIDENT </p>	<p style="text-align: center;">Computational Thinking Skills</p> <p>Computational thinking provides a vital skill set in which students must possess in order to fulfill the industry’s needs in the jobs of tomorrow. Our ever-changing workforce creates a critical need for innovation. Our students need computational thinking skills not just to solve the problems within their educational journey, but to also meet the challenges of adapting to our constantly changing workforce.</p> <p style="text-align: center;"> DECOMPOSITION PATTERN RECOGNITION ABSTRACTION ALGORITHMS </p>
<p style="text-align: center;">Computer Science Units of Study</p> <p>Minecraft: Education Edition provides meaningful, relevant, and engaging units of study. The units of study will possess a conceptual lens to allow for depth and complexity to develop conceptual understanding—knowledge which transfers through time, across cultures, and across situations.</p> <p style="text-align: center;"> DIGITAL CITIZENSHIP PROGRAMMING CYBERSECURITY IMPACTS OF COMPUTING </p>	<p style="text-align: center;">Community</p> <p>As students gain and possess new knowledge and skills, we strive for them to find a greater purpose of “why do I need to know this” or more importantly, “how can I use this information?”. We aim to empower students, develop confidence and self-efficacy into a commitment to serve the community in which we live in and beyond.</p> <div style="text-align: center;"> </div>

This unit will focus on **programming**, as students will learn and apply important coding concepts that will allow them to create powerful code for their Agent to complete tasks and solve problems.

This unit will focus on the coding mindset of being **considerate**, as they learn about different animals in different biomes and the issues they are facing. Students will consider how code and innovative ideas can help or even solve problems in these habitats.

This unit will focus on **algorithms** as students explore the necessary and individual steps needed to create effective code.

This unit will provide students with the opportunity to consider how they can impact the greater **community**. Students will create code to rectify problems within the biomes to help the animals!

Instructional Sequence

This next section will provide you with an overview of the activities included in this lesson sequence. The lesson sequence is presented in chronological order—we suggest working in order, as the content will build upon skills presented in the previous session. A session is equivalent to one class period, or a 45-60 minute session. However, educators should feel empowered to modify and adapt the lesson sequence to best meet the needs of their students.

Lesson Sequence Overview

Session	Objectives	Teacher will	Students will	Resources
1*	<i>Students will learn to utilize decomposition as a strategy to break down problems.</i>	<i>Model creation of a sequence of instructions for a dance using student volunteers.</i>	<i>Students will program the Agent to move according to the command blocks.</i>	<u>Basic Moves and the Agent</u>
2*	<i>Students will utilize effective research skills to participate in collaborative projects on various biomes.</i>	<i>Model effective research practices to create an informative writing piece</i>	<i>Students will research about turtles to create background knowledge for the upcoming biome exploration.</i>	<u>Animal Research Template</u>
3*	<i>Students will expand their knowledge of sequencing, algorithms, and pattern recognition.</i>	<i>Model how to effectively create a string of code to complete a specific task</i>	<i>Students will use sequencing to help them program the Agent to make necessary repairs and clean up the area to help the sea turtles get safely to the ocean.</i>	<u>Sea Turtle Assistance</u>
4*	<i>Students will utilize effective research skills to participate in collaborative projects on various biomes.</i>	<i>Model effective research practices to create an informative writing piece</i>	<i>Students will research polar bears to create background knowledge for the upcoming biome exploration.</i>	<u>Animal Research Template</u>
5*	<i>Students will expand their knowledge of loops and conditionals.</i>	<i>Model how to construct an algorithm using loops and conditionals</i>	<i>Students will utilize pseudocode to help them plan out their program to help the polar bear cub find its family. Based on</i>	<u>Polar Bear Rescue</u>

			<i>the pseudocode, students will code the Agent to execute the desired program.</i>	
6*	<i>Students will utilize effective research skills to participate in collaborative projects on various biomes.</i>	<i>Model effective research practices to create an informative writing piece</i>	<i>Students will research about pandas to create background knowledge for the upcoming biome exploration.</i>	<u>Animal Research Template</u>
7*	<i>Students will apply their knowledge of loops to create and test a program.</i>	<i>Explain and model how to utilize a nested loop within a program</i>	<i>Students will utilize pseudocode to help them plan our their program to create a new home for the panda. Based on the pseudocode, students will code the Agent to execute the desired program.</i>	<u>Panda's Protected Habitat</u>
8*	<i>Students will utilize effective research skills to participate in collaborative projects on various biomes.</i>	<i>Model effective research practices to create an informative writing piece</i>	<i>Students will research about gray wolves to create background knowledge for the upcoming biome exploration.</i>	<u>Animal Research Template</u>
9*	<i>Students will apply their knowledge of loops and nested loops to create and test a program.</i>	<i>Explain and model how to utilize loops and nested loops with conditional statements within a program</i>	<i>Students will test and code the Agent in order to secure the livestock at the farm from the gray wolves.</i>	<u>Gray Wolves</u>
10-16*	<i>Students will collaborate with peers to create a computational artifact.</i>	<i>Explain the summative task and provide success criteria and guidance to collaborative groups.</i>	<i>Students will work together to plan, design, test, and present their biome solution.</i>	<u>Revisiting Biomes</u>

Educational Standards

CSTA Standards

- **1B-AP-11** Decompose (break down) problems into smaller, manageable subproblems to facilitate the program development process.
- **1B-AP-10** Create programs that include sequences, events, loops, and conditionals.
- **1B-AP-08** Compare and refine multiple algorithms for the same task and determine which is the most appropriate.
- **1B-AP-15** Test and debug (identify and fix errors) a program or algorithm to ensure it runs as intended.
- **1B-AP-09** Work respectfully and responsibly with others online.
- **1B-AP-16** Take on varying roles, with teacher guidance, when collaborating with peers during the design, implementation, and review stages of program development.
- **1B-AP-17** Describe choices made during program development using code comments, presentations, and demonstrations.

ISTE Standards

- **1.5.c** Students break problems into component parts, extract key information, and develop descriptive models to understand complex systems or facilitate problem-solving.
- **1.3.d** Students build knowledge by actively exploring real-world issues and problems, developing ideas and theories, and pursuing answers and solutions.
- **1.4.a** Students know and use a deliberate design process for generating ideas, testing theories, creating innovative artifacts or solving authentic problems.
- **1.5.d** Students understand how automation works and use algorithmic thinking to develop a sequence of steps to create and test automated solutions.
- **1.6.a** Students choose the appropriate platforms and tools for meeting the desired objectives of their creation or communication.
- **1.6.d** Students publish or present content that customizes the message and medium for their intended audiences.
- **1.7.c** Students contribute constructively to project teams, assuming various roles and responsibilities to work effectively toward a common goal.

National Curriculum: Computing - Key Stage 2

- Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts
- Use sequence, selection, and repetition in programs; work with variables and various forms of input and output
- Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs
- Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information

Australian F-10 Curriculum: Digital Technologies - Year 3 and Year 4

- Following, modifying and describing the design of a game involving simple algorithms represented diagrammatically or in English (ACTDIP019)
- Experimenting with different ways of representing an instruction to make a repetition, for example loops in a flowchart diagram or using a 'REPEAT' statement (ACTDIP018)
- Planning and implementing a solution using a visual programming language, for example designing and creating a simple computer game involving decisions and repetitions, suitable for younger children, that requires user input to make selections, taking into account user responses (ACTDIP020)
- Experimenting with different ways of instructing to make choices and repeat instructions (ACTDIP020)
- Describing in simple terms the nature of a problem and what a solution needs to achieve, for example what need the problem is associated with, who the solution is needed for, what data are needed and what features the solution would need to include (ACTDIP017)
- Using a range of communication tools to share ideas and information, for example participating in collaborative online environments (ACTDIP022)

Computer Science Concepts: Coding Fundamentals Part 1 - Animal Research Center

Lesson	Concept(s)
Basic Moves and the Agent	Decomposition Sequencing Events + Event Handlers
Animal Research Template	Credibility/Accuracy of Resources Public Domain/Creative Commons Copyright Intellectual Property
Sea Turtle Assistance	Pattern Recognition Algorithms Sequencing Loop (repeat)
Polar Bear Rescue	Sequencing Loops Conditionals Control Flow (structure)
Panda's Protected Habitat	Loops (repeat) Nested Loops Control Flow (structure)
Gray Wolves	Loops (repeat) Nested Loops Conditionals Control Flow (structure)
Revisiting Biomes (Summative Task)	Program Development Collaboration Debugging

MINECRAFT VISUAL GLOSSARY

Agent

personal robot in Minecraft

Blocks

the basic units of structure in Minecraft that make up the game's world

Book & Quill

an item used to create written books in Minecraft

Camera

allows you to take screenshots and selfies in Minecraft: Education Edition

Chalkboards

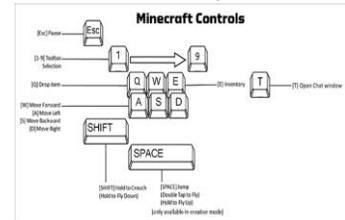

special blocks that allow you to write and display text in Minecraft

Controls

(keyboard)

keyboard buttons that help you move around and complete tasks

Controls

(touch)

the touch pad that helps you move around and complete tasks

Creative

game mode that gives you unlimited resources, ability to fly, and lets you destroy blocks instantly when mining

Hotbar

selection bar that appears on the bottom of the screen

Inventory

pop-up menu the player (or Agent) uses to manage the items they carry

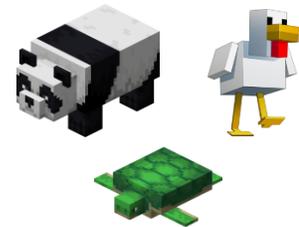

Minecraft: Education Edition

a game-based learning platform

Mob

game character resembling a living creature

Portfolio

saves all of the photos that you have taken with a camera; allows you to add captions

Spawn Point

the location where a player begins game play

NPC

non-player character

Radio

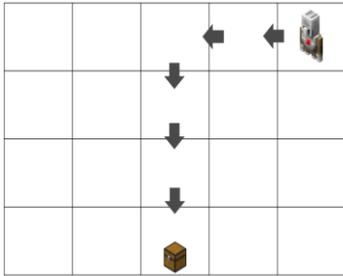

device used to reset the coding activity

COMPUTER SCIENCE GLOSSARY

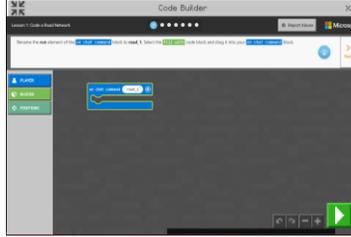

Algorithm

a sequence of defined steps

Code Builder

coding editor used to create programs

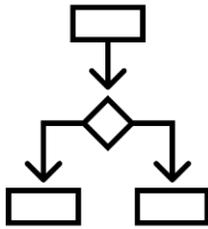

Code (Coding)

the method of giving a computer instructions to perform a specific task

Conditional

an action that occurs if something specific happens

Copyright

the act of giving, receiving, and sharing information (talking, writing, listening, or reading)

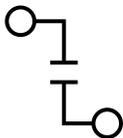

Debugging

process of finding and resolving errors within computer programs

Decomposition

breaking down a complex problem into smaller, manageable, and easy-to-understand parts

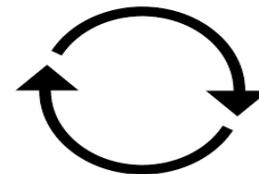

Intellectual Property

the original expression of an idea that later becomes something tangible

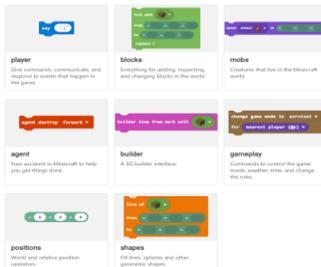

Loop

sequence that repeats a portion of code a set number of times until the desired task is complete

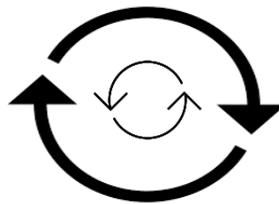

MakeCode Blocks

blocks used to create code

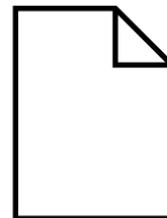

Nested Loop

a loop inside a loop

Pseudocode

informal description of a computer program or algorithm

Program Development

process of creating a program with a description of the sequence of events, goals, and expected outcomes

Sequence

instructions presented in a specific, correct order to a computer

Testing

the process of running the program to see if runs as intended
